

PHASE6

PROJECT TESTING

Testing and Validation

Project: ImplementClientScript&UIPolicy(Incident)

Date	30/09/2026
Team ID	6ab4ddb0fc666a751b566e9
Project Name	Implement Client Script & UI Policy(Incident)

Introduction

Project Testing is the phase in which the implemented ServiceNow configuration is verified against the defined requirements. The testing focuses on the High Impact UI Policy, UI Policy Actions, onChangeClientScript, onSubmitClientScript, and onCellEditClientScript.

Testing Objectives

- Verify that Assignment Group becomes mandatory when Impact is High.
- Verify that Urgency is automatically set to High when Impact changes to High.
- Verify that Urgency becomes read-only under the High Impact condition.
- Verify that a High Impact Incident cannot be submitted when Assigned To is empty.
- Verify that UI Policy restrictions are reversed when Impact changes away from High.
- Verify that direct State changes through listed editing are blocked.
- Verify that State changes made through the Incident form can be saved.

Test Environment

Item	Test Requirement
Platform	ServiceNow instance
Module	Incident Management
Primary Table	Incident
Configuration	UI Policy, UI Policy Actions, Client Scripts
Test Interface	Incident form and Incident list
User Access	Authorized configuration/test access

Test Cases and Expected Results

Test ID	Scenario	Action	Expected Result
TC-01	High Impact mandatory check	Set Impact to High	Assignment Group becomes mandatory.
TC-02	Urgency automation	Change Impact to High	Urgency is automatically set to High.
TC-03	Urgency control	Try to edit Urgency under High Impact	Urgency remains read-only.
TC-04	Submission validation	Submit High Impact Incident with Assigned To empty	Submission is blocked and an error is displayed.
TC-05	Successful save	Fill Assigned To and submit	Incident is saved successfully, subject to other validations.
TC-06	Reverse condition	Change Impact from High to Medium	Assignment Group is no longer conditionally mandatory and Urgency becomes editable.
TC-07	List edit restriction	Double-click State in Incident list	Change is blocked and alert is displayed.
TC-08	Form-based State update	Change State from the Incident form	State change is saved successfully.

Mandatory Enforcement Test

Create or open an Incident and set Impact to High. Leave Assigned To empty and attempt to submit the record. The onSubmit Client Script should display the configured error message and stop the save operation.

The screenshot shows the ServiceNow 'Incident - Create INC0010001' form. At the top, there are two red error messages: 'The following mandatory fields are not filled in: Short description, Assignment group' and 'The following mandatory fields are not filled in: Short description'. The form fields are as follows:

- Number: INC0010001
- Channel: -- None --
- * Caller: Adela Cervantsz
- State: New
- Category: Inquiry / Help
- Impact: 1 - High
- Subcategory: -- None --
- Urgency: 1 - High
- Service: (empty)
- Priority: 1 - Critical

The 'Submit' button is highlighted with a green box, indicating the action being tested.

Figure 6.1: High Impact Incident validation when Assigned To is empty.

SuccessfulSaveTest

Enter a valid value in Assigned To and submit the Incident. The record should save successfully. During this test, also confirm the automatic Urgency update and read-only behavior

The screenshot displays the ServiceNow 'Incident - Create' form for record INC0010001. The form is organized into two main columns. The left column contains fields for 'Number' (INC0010001), 'Caller' (Adela Cervantsz), 'Category' (Inquiry / Help), 'Subcategory' (-- None --), 'Service', 'Service offering', 'Configuration item', 'Short description' (testing UI policy), and 'Description'. The right column contains fields for 'Channel' (-- None --), 'State' (New), 'Impact' (1 - High), 'Urgency' (1 - High), 'Priority' (1 - Critical), 'Assignment group' (Software), and 'Assigned to' (Beth Anglin). A 'Submit' button is located at the top right of the form. The bottom of the screen shows a Windows taskbar with a screen recording overlay indicating the date 2026-09-28 and time 08:33 PM.

Field	Value
Number	INC0010001
Caller	Adela Cervantsz
Category	Inquiry / Help
Subcategory	-- None --
Service	
Service offering	
Configuration item	
Short description	testing UI policy
Description	
Channel	-- None --
State	New
Impact	1 - High
Urgency	1 - High
Priority	1 - Critical
Assignment group	Software
Assigned to	Beth Anglin

ReverseConditionTest

Open an Incident with Impact set to High and change Impact to Medium. Verify that the conditional mandatory and read-only restrictions are reversed according to the configured UI Policy.

ListEditBlockingTest

Open the Incident list and attempt to edit the State field directly. The onCellEdit Client Script should display the configured alert and reject the list edit.

The screenshot shows the ServiceNow interface with an incident list. A modal dialog is displayed over the list, stating: "dev446997.service-now.com says State cannot be updated using list editing. Please open the Incident." with an "OK" button. Below the dialog, the incident list is visible. The row for incident INC0008111 is highlighted, and a dropdown menu is open for the "In Progress" state, showing options for "Save (Enter)", "In Progress", and "Cancel".

Number	Opened	Short description	Assignment group	Assigned to	Updated
INC0009009	2018-08-08 01:06:16	Unable to access shared folder.	(empty)	(empty)	2018-12-23:30:24
INC0009005	2018-08-31 21:35:21	Email server is down.	(empty)	(empty)	2018-12-23:18:55

Form-Based Update Test

Open the same Incident through the form, change the State field, and select Update. The form-based State change should be saved successfully, provided other validation rules are satisfied.

Number	Opened	Short description	Caller	Priority	State	Category	Assignment group	Assigned to	Updated
INC0010001	2026-09-28 07:57:55	testing UI policy	Adela Cervantsz	2 - High	In Progress	Inquiry / Help	Software	Beth Anglin	2026-09-28 08:14:48

TestResultSummary

Record the actual Pass/Fail outcome only after executing each test case in the ServiceNow instance.

- Mandatory enforcement-record actual Pass/Fail result.
- Urgency auto-setting-record actual Pass/Fail result.
- Read-only control-record actual Pass/Fail result.
- Save validation-record actual Pass/Fail result.
- Reverse condition-record actual Pass/Fail result.
- Listed it blocking-record actual Pass/Fail result.
